

Same data, same tracts — why deterministic validation matters

Atlanta metro · 530 Fulton + DeKalb census tracts · real TIGER geometry · tree-canopy-loss (seeded SAR variable)

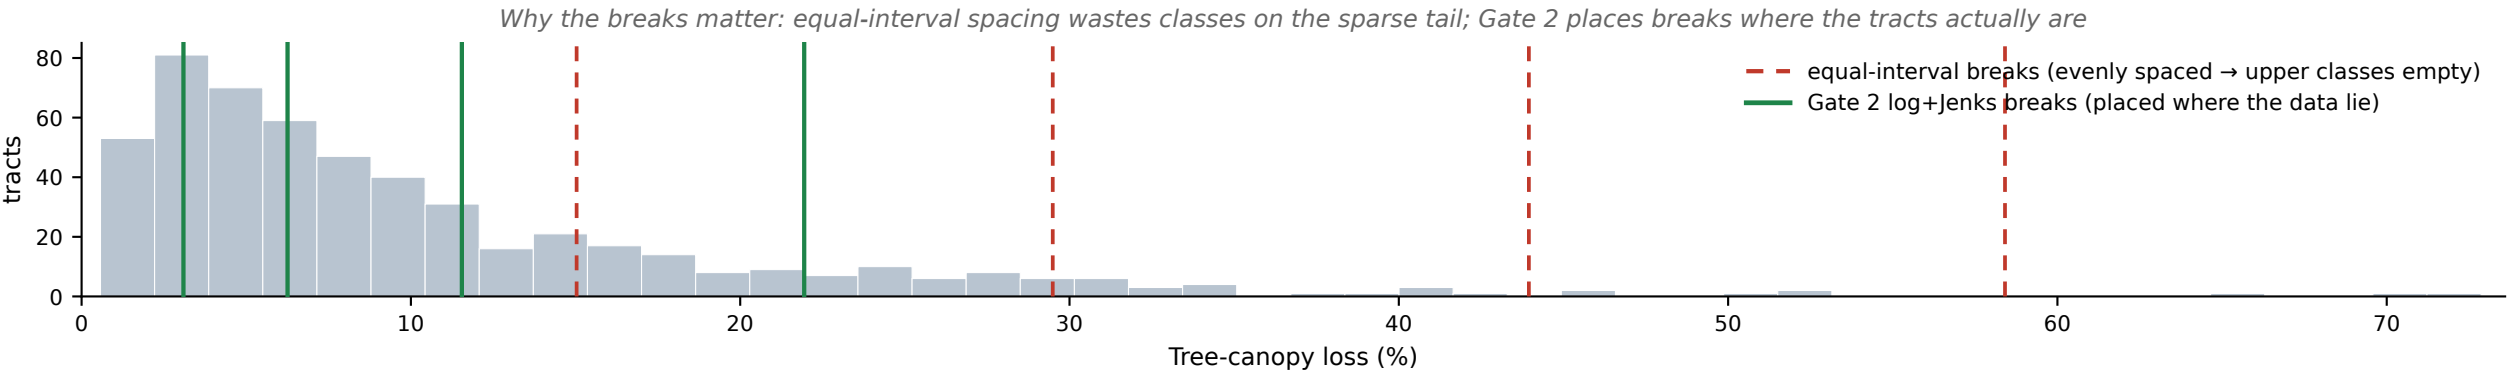

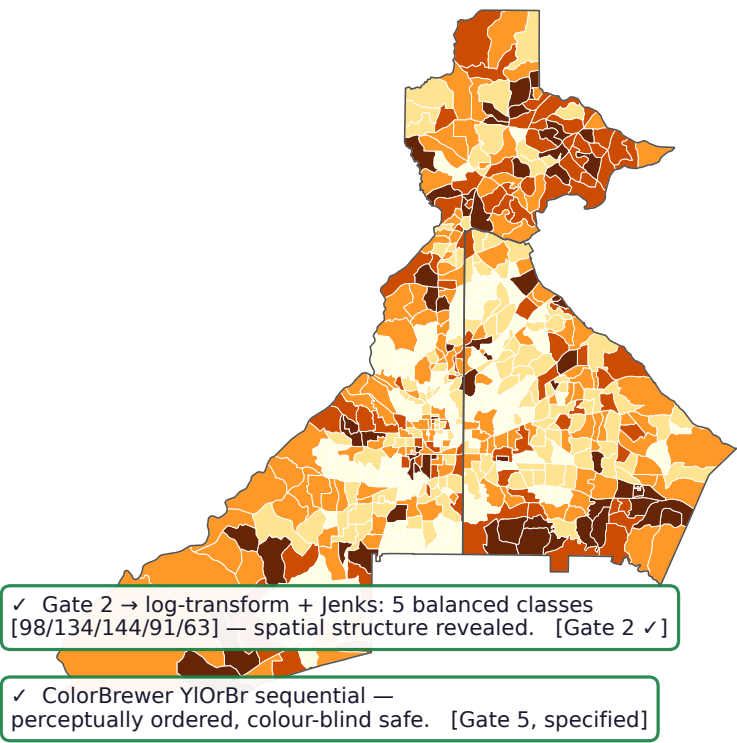

UNGATED

naïve LLM output

GATED

AutoCarto-Agent output

Gate 2 (classification) is implemented and computed on this figure. Gate 5 (colour) is specified in the roadmap — ramps shown to illustrate the failure it targets.

GVF is deliberately not the score here: equal-interval attains a comparable GVF (0.87 vs 0.83) yet hides the pattern, so class balance is the honest metric.
