

Same data, same tracts — why deterministic validation matters

Atlanta metro · 530 Fulton + DeKalb census tracts · real TIGER geometry · tree-canopy-loss (seeded SAR variable)

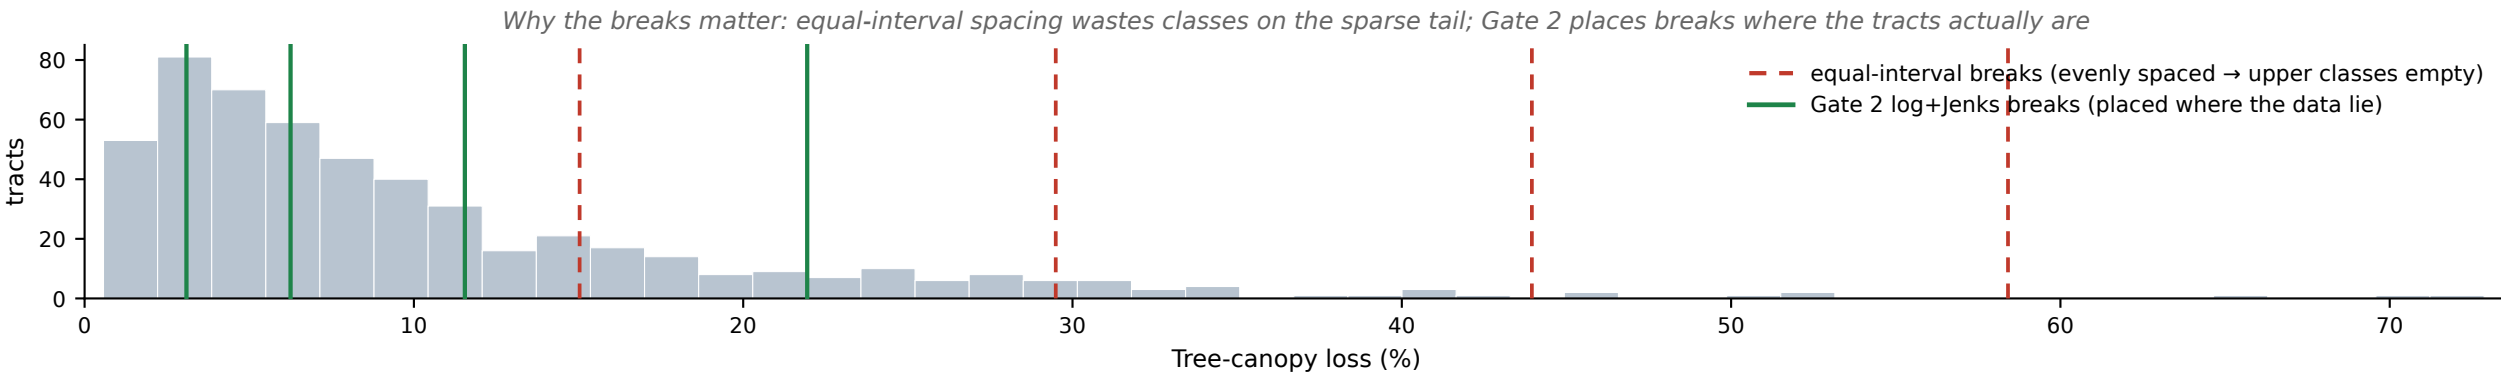

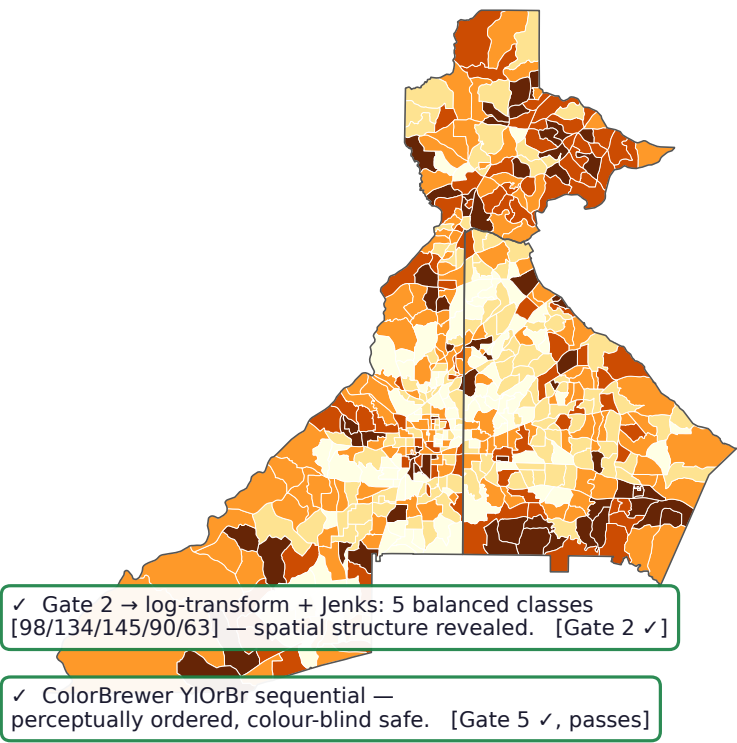

UNGATED

naïve LLM output

GATED

AutoCarto-Agent output

(classification) and Gate 5 (colour) are both implemented and computed on this figure. YlOrBr passes Gate 5's CVD-discriminability check; jet's real flaw (non-monotonic perceptual ordering) is a documented cartographic problem Gate 5's current metric does not capture. GVF is deliberately not the score here: equal-interval attains a comparable GVF (0.87 vs 0.83) yet hides the pattern, so class balance is the honest metric.
